

View PDF's in Firefox.

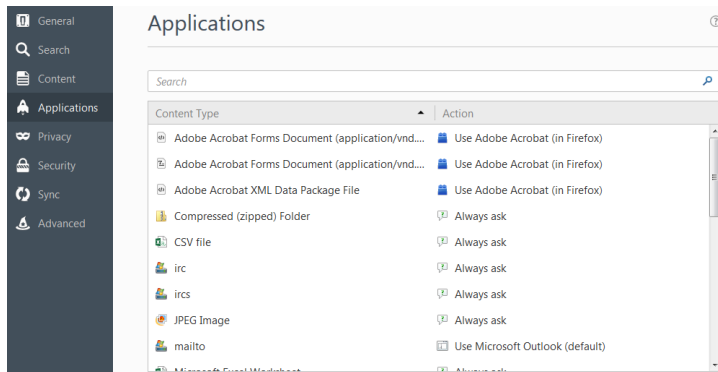

If you can't see the PDF Viewer on a webpage, or get an Opening dialogue box, this is due to a setting within Firefox. To enable view, follow the steps below:

1. In Firefox, go to the top right of your window and click the “**Hamburger Stack**”  icon to see the menu options >

2. Next, navigate to “**Options**” >

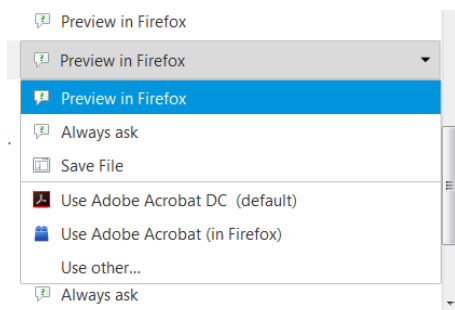

3. Now, navigate to “**Applications**”. (Keep in mind, depending on your browser version, applications can be displayed differently – may not look like my screen capture below.) >

4. Within the box, navigate to “**Portable Document Format (PDF)**” >

5. In the Action column click the second column stating “**Always ask**” and select the option, “**Preview in Firefox**” *Note: it may also say “*Save File*”, either or, just change to *Preview in Firefox*.

6. Finally, refresh page. You should now see the PDF Viewer and no longer see the Open dialogue box.

Done!
