Be aware of changes to HC password policy

IT security is becoming a bigger concern because hacker attacks are increasing in both number and severity. While the use of email and other electronic communication increases, so does the possibility that new vulnerabilities will be exploited. Since passwords are the first line of defense against the intruder and malware software, we have created a password policy that will be strong enough to fend off most attacks related to user accounts. Before you will find the details of this new policy to get you started:

- Must contain your account name or part of your full name that exceed two consecutive characters
- Be at least eight characters in length
- Non-alphabetic characters (for example - !, $, #, %)
- Base 10 digits (0 through 9)
- English lowercase characters (a through z)
- Be changed every 60 days
- Contain characters from three of the following four categories:
- Be at least eight characters in length
- Must not match any of your previous 12 passwords

If you have any questions, please contact Allen Wood in the Hill College Information Technology Department at 7845.

To Kill a Mockingbird turns 50

A six-time Emmy winner, Harper Lee’s “To Kill a Mockingbird” turns 50 years old. To give you an idea of the size of the work...the catapult is just under seven feet high by seven feet at the base, and running.
